Score

15/19.0 - 78.95%

Failed Responses

This section lists responses that were set as "failed responses" in the template used for this audit

Question	Response	Details
After contact with patient surroundings	No	The nurse did not perform hand hygiene after touching a patient's IV stand. Here's a photo of the said nurse who did not clean her hands, but already made contact with another patient.
 <p>Appendix 1</p>		
Before patient contact	No	The occupational therapist forgot to clean her hands after opening the door. She immediately approached the patient and began the session. She also did not wash her hands when she came back to the main occupational therapy room.
 <p>Appendix 2</p>		
After patient contact	No	
After contact with patient surroundings	No	

Actions

#1. Remember to clean your hands with at least any alcohol-based formulation after leaving a patient's surroundings. Make sure your hands are clean before delivering routine care to another patient.
