

Temperature and humidity sensors, accessible to all businesses

Monitoring temperature and humidity is no easy feat.

Manual checks waste time and energy, and only look at a single moment.

Data is often missed, or collected in a format that can't be saved or analysed.

Most sensors on the market are cost-prohibitive and hard to install.

With over 500 million inspection questions completed in iAuditor every year, we could see that temperature and humidity monitoring was a focus area, costing our customers both time and money. We aim to remove error-prone manual checks, and offer alerts when there's a problem, so you have better visibility, improved stock monitoring, and stress-free, digital compliance processes.

Access affordable and easy-to-install sensors

An affordable sensor solution, you can set-up yourself, that just works out of the box.

Save time and effort

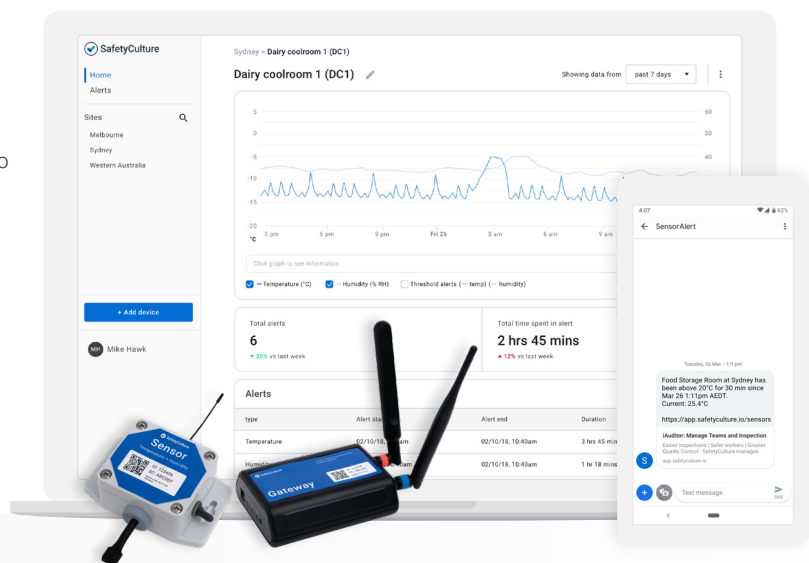

Automated data logging removes the need for manual processes, and gives you the data to understand your business like never before.

Prevent incidents and loss

Customisable and triggered alerts let the right people know when something goes wrong so you can respond immediately.

Achieve greater compliance

More accurate and frequent readings taken and stored automatically in iAuditor ensures you are compliant, and have the data to prove it.

Our sensors are solving problems across industries.

Helping our customers reduce time spent on tedious tasks, preventing loss, increasing compliance and creating peace of mind.
