I should place a sticky note on it as soon as possible so that people know not to use it because it's broken and not to touch it because it could be dangerous.

I should place a sticky note on it as soon as possible so that people know not to use it because it's broken and not to touch it because it could be dangerous.

Please explain the near miss that occurred:

While it was reheating leftovers from the office lunch, the microwave suddenly started "sparking" (I'm not sure if this is the right term but I don't know how else to describe it). When it stopped sparking, I was going to open it to get the food (I was really hungry), but I heard my manager call my name. When I looked around to see where she was, the microwave started sparking again but this time it was more intense.

Stop work or work business as usual?
