Lights/Marker Lamps?	OK
Springs Appear OK?	OK
Straps/Tie Downs?	OK
Trailer Tires & Pressure?	OK
Trailer Platform Integrity?	OK

Summary

List any other condition which may affect safe vehicle operation.

1. Regularly schedule vehicle maintenance — oil changes and all-over inspections — tops most automotive experts' lists to ensure trucks last longer.

2. Clean it up.
3. Keep tires properly inflated to prevent unnecessary wear and tear. The recommended air pressure is usually indicated in the owner's manual and the pickup truck's tire well. Replace worn out tires if necessary. Check bolts and fasteners if properly screwed.

Enter any other observations

None

Rate the overall condition of the vehicle

Average

Recommendations**Enter recommendations here**

1. Regularly change engine oil and fluids.
2. Regularly adjust belts, hoses, brake pads, drive belts, timing belts and hoses. Replace them if necessary. The brake system should also be in good condition. Worn out brake pads should also be immediately replaced.
3. Regularly inspect the suspension system. Vital components such as the struts, springs, shock absorbers, and linkages should be regularly checked.
